**EDITION**

The Reference8-20 anniversary digital music streamer uses a high performance built-in CPU unit with a FPGA Dual-Clock design, which has a twin custom crystal oscillator supply ultra-lower -130dB phase noise specification.  
 The Reference8-20 anniversary supports PCM lossless WAV/FLAC/AIFF/ALAC/AAC/MP3/WMA PCM file format the sampling up to 32bit/384kHz and lossless DFF/DSF/ISO DSD128 file format. The DSD stream is directly transmitted from the CPU to the DAC inside the Reference 8-20 anniversary with no conversion to the PCM stream.  
 The output terminal is through the WBT and NTRIC High-END level class.  
 The Reference8 supports USB external CD/DVD-ROM to play CD.

**SUZANNE**

Suzanne<sup>®</sup> which based on ARM embedded system, supports all of present music formats, optimize for the portable long-lasting battery life and sounds better.

The digital system Dual-Clock design, supply ultra-lower jitter; supports DSD direct decoder, DSD stream signal direct transmit to DAC without converted to PCM. Suzanne supports gapless playback. And display album cover during the music playing. The integrated headphone amplifier keeps the High quality HIFI equipment design, which optimized for drive high-impedance headphone.

Suzanne supply touch and gestures operation. Support external MicroSD memory, up to 128GB( Maxim 2TB volume). Time for battery up to 6.5 hours under high resolution music playing.

We customized a Dock for extension. The Dock has RJ-45 network port, DC 5V charging and USB port for external storage. Suzanne couple with Dock connect to the local LAN with internet will enable the network function include DLNA APP remote control and internet radio.

The Dock makes Suzanne connect to Home Theater and Hi-Fi audio

**NEW 1.099€**

**BASE SUZANNE**

**NEW 143€**

**REFERENCE DSD 1.1**

Reference DSD1.1 is a high performance D/A converter for CAS purpose. We use the advanced X-MOS module to support DSD playback up to DSD256. The Reference DSD1.1 has a Hi-Speed Audio USB2.0 interface for the digital input from computer. Support Native DSD streams mode, this is pure original DSD signal which never be converted. It also uses the special USB GND isolation design, which keeps the noise away from the computer's USB. It supports free Driver for Apple device (MAC/ phone/ pad) and Andriod device. The clients can use APPs to play DSD and PCM files in the apple and andriod phone and Pad. There is a special tube buffer design before the RCA output, which makes the sound better. Reference DSD1.1 has a headphone output which adapts to headphone having impedance ranging from 10 to 600 ohm.

Features  
Multiple PCM digital filter option  
PCM digital filter mode:

1. Short delay Sharp
2. Short delay Slow
3. Sharp Roll-off
4. Slow roll-off
5. Super Slow roll-off

The various digital filter status means various sounds. The customer will gets smooth, sharp, fast, slow etc difference sounds style by their choice.

The DSD supply CUT OFF FILTER option 50KHz / 150KHz.  
It's for improve the high frequency sounds if the recording ultra high frequency has some background noise.

The sound Phase option supply Phase+ and Phase-.  
Some recording was built by reversed phase. The phase ajustment will fixed the incorrect phase recording

We suggest using the JRiver and Foobar2000 Media Center in the Windows operating system. And we suggest using the "Audir vana plus" Media Center in the iOS system
